

Patio and Wall Section Layout

Help Note:

Break down your patio or wall into the largest rectangular sections you can. The calculator will prompt you for the width (patio) or height (wall) and length of each section and then will combine the sections to give you a grand total. The maximum number of sections is 10. If you have more than 10 sections, repeat the calculation for each set of 10 and add the totals. Save your data to paper each time and add the totals by hand.
